NATURE

This grading gets a natural and authentic look from a wide spectrum of colour tones and variations between individual planks. These colour tones and vivid features make each plank tell its own story. Extensive areas with lighter tones of colour are seen along the grain pattern and in the sapwood. Several large knots and natural fine splits occur. Knots and other irregularities are to the greatest extent possible factory filled with a one colour filler to ensure a uniform and beautiful surface.

About the floor

Oak is a hardwood species characterised by being hard-wearing and therefore very suitable for flooring. The wood has a warm golden glow, an interesting grain structure and over time the natural ageing gives the wood an authentic appearance.

Junckers solid hardwood flooring is produced and categorized in accordance with EN 13226, EN 14342 and Junckers own factory standard.

The floors are made exclusively from solid hardwood and the images illustrate the colour, knots and structural graining variation characteristic for the specific wood species and grade.

Each image shows the average appearance of the grade. It is normal to see a variation in appearance between individual planks and floors produced and installed at differing times.

Up to 5 % of the planks may contain features of the next style.

Hardwood floors may fade and change colour over time, especially when exposed directly to sunlight.

OAK NATURE PLANK | GRADES

Nature

The actual colour on a wooden floor can vary from the colour shown in this style chart. This is due to the fact that colours are very difficult to reproduce online and in printed material. Junckers accepts no liability to discrepancies and we always recommend ordering a physical sample before placing an order.
